Jesus Velazquez

Full-Stack Software Engineer

305-632-1860 · jesusvelazquez0980@gmail.com · github.com/JesusVelaz · jesusvelazquez.dev · linkedin.com/in/jesusvelazquez980
Washington, DC Metro Area · Active TS/SCI with Full-Scope Polygraph · Fluent in English and Spanish

Full-stack software engineer and technical lead with 3 years of experience building secure, data-heavy web applications for the DoD/IC, plus independent SaaS products and AI developer tools, using React/TypeScript, Java, Python, and Kubernetes.

EXPERIENCE

National Security Agency · U.S. Department of Defense **Sep 2024 – Present**

Technical Lead Mar 2026 – Present

- Architected the organization's first self-service bulk-ingestion pipeline for an enterprise knowledge repository (Next.js, TypeScript, FastAPI, PostgreSQL, Redis), enabling 100K+ record loads that previously required one-off scripts; earned a division performance award.
- Migrated three application environments from legacy servers to Kubernetes, standardizing repeatable GitOps deployments with Helm, Argo CD, Harbor, and Rancher.
- Lead and mentor a team of 5 engineers through onboarding, architecture walkthroughs, code review, and progressively scoped assignments.
- Present application demos to technical leadership, prospective users, and partner working groups, driving adoption and shaping development priorities.

Software Engineer Sep 2024 – Mar 2026

- Prevented an imminent production outage by rewriting a nightly purge job from full-history scans and per-row deletes to bounded, batched queries, achieving a 7x speedup at current volume.
- Raised the application's Section 508 accessibility score by 27% by replacing legacy UI components and remediating compliance findings; earned a division performance award.
- Doubled large-table performance by virtualizing row and dropdown rendering to only visible records.
- Built and maintained a reusable React/TypeScript UI component library for a mission-critical data-management application backed by Java services.

Fidelity Transport & Logistics **Oct 2023 – Jun 2024**

Web Developer

- Cut form-processing time 30% by adding conditional logic and automated document export, reducing manual data-entry errors.
- Built and maintained customer-facing websites; debugged and resolved performance and responsiveness issues.

INDEPENDENT PROJECTS

Waiver Director · waiverdirector.com **Mar 2026 – Present**

Co-founder & Software Engineer

- Developed full-stack features for a multi-tenant waiver management SaaS using SvelteKit, Svelte, TypeScript, and Convex, enforcing workspace-level data isolation and server-side authorization.
- Built an automated email follow-up system with a rich-text editor, reusable templates, dynamic content, scheduled Convex jobs, and Resend delivery to support post-waiver customer engagement.

Agents Café · agentscafe.dev **Sep 2026 – Present**

Founder & Software Engineer

- Built a local control room for running Claude Code and Codex agents (Next.js, TypeScript, Fastify, Prisma, SQLite, Claude Agent SDK), rendered as a pixel-art café where agents move between stations as their runs emit tool-call events.
- Enabled cross-agent delegation between Claude Code and Codex over an in-process MCP server, with per-message permission modes and per-agent model selection.

EDUCATION & CERTIFICATIONS

Florida International University · B.A. Computer Science, May 2023 · GPA 3.66 · Dean's List
MIT Lincoln Laboratory · iDiscovery: Agentic AI certificate, Apr 2026

SKILLS

AI & LLM: Claude Agent SDK, LLM agents, MCP, tool calling, LLM evaluation, Vercel AI SDK/Gateway
Languages: TypeScript, JavaScript, Python, Java, SQL, C, HTML, CSS
Frontend: React, Next.js, SvelteKit, Svelte, component libraries, Section 508 accessibility
Backend & Data: FastAPI, Fastify, Java services, REST APIs, Convex, Prisma, PostgreSQL, MySQL, Redis, SQLite
Cloud, DevOps & Tools: Kubernetes, Helm, Argo CD, Harbor, Rancher, Docker, GitLab CI/CD, GitOps, AWS (EKS, ECR, EC2, S3), Git
